DETAILED ACTION

1. This Office Action is in response to Applicant's election of claim 1 of Group I without traverse. Applicant also has elected MMP-1 and MMP-9. Applicant has cancelled claims 2-6.

Information Disclosure Statement

2. The information disclosure statements (IDS) submitted on 25 June 2008 are in compliance with the provisions of 37 CFR 1.97 and have been considered by the examiner. However, there are several references in foreign languages with the abstract translated in English. The Office has considered only the English abstract.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

3a. Claim 1 is rejected as being vague and indefinite because Applicant is claiming the instant invention by its functional properties. It is unclear from which species the said protein was isolated. Applicant should particularly point out and distinctly claim the protease inhibitor by claiming structural characteristics associated with the protein (e.g. amino acid sequence, molecular weight, etc.).

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4a. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Farina et al. (2001, IDS of 6/25/08).

Claim(s) is drawn to a protease inhibitor protein with redox activity.

Farina et al discloses Thioredoxin (TRX) a redox enzyme (protein) which is a protease inhibitor. Thioredoxin inhibits metalloproteinase (MMP-2) and other proteases. Absent evidence to the contrary Thioredoxin is expected to have protease activity against MMP-1. Therefore, Farina et al. anticipates the instant invention.

Conclusion

5. No claims are allowed.
